

MILAD GERAMI

Power BI Developer | SQL & ETL

m.gerami.data@gmail.com | linkedin.com/in/milad-gerami-67960953

Southern California | Open to relocation to the Pacific Northwest

PROFESSIONAL SUMMARY

Power BI Developer with a background in Civil Engineering, Construction, and Telecommunications. I build dashboards, data models, and ETL pipelines using Power BI, SQL Server, SSIS, Microsoft Fabric and Snowflake, and I bring an engineering mindset to every problem I work on: structured, methodical, and focused on getting it right. My engineering years gave me a direct advantage I carry into every BI project, I understand the operational side of a business before I touch the data, which makes it easier to translate what stakeholders actually need into solutions that work. My project work covers end-to-end BI solutions built on real government and industry data, from SSIS pipelines and SQL Server models to Fabric lakehouses and Direct Lake semantic models, I own the full picture.

EXPERIENCE

Power BI Developer Colaberry Inc - Remote

Jan 2024 – Present

- Built, maintained, and troubleshoot Power BI reports and dashboards for client engagements, supporting report delivery and resolving data issues across multiple projects
- End-to-end Automotive Market Intelligence Dashboard, two independent government data sources, 40 years of US market data, full SSIS pipeline built from scratch, analyzing how Gas, Hybrid, and Electric vehicles compare by efficiency, cost, and market share
- Early warning system for construction project teams, built a risk dashboard analyzing 1,000+ projects across 83 risk variables, powered by a machine learning model with 96.5% prediction accuracy, giving project managers visibility into risk before it became a problem
- Designed star schema data models and wrote DAX measures to support KPI tracking, cost overrun analysis, and executive reporting
- Engineered SSIS ETL pipelines to extract, clean, and load data from multiple sources into SQL Server

Data Analyst (Intern) Colaberry Inc - Remote

July 2023 – Dec 2023

- Built LaunchForge AI, a full-stack SaaS platform using PostgreSQL, REST APIs, and VS Code, gaining full visibility into how data moves from the database layer through the API into reporting and analytics, context that directly shapes how I design BI solutions today
- Contributed to a data integration project at Colaberry, implementing SSIS pipelines into a star schema dimensional model with SCD Type I, II, and III and conditional error handling
- Developed SQL queries and data models to support analytics and dashboard development

Telecommunications Specialist All States Engineering & Surveying

April 2020 – Jan 2023

- Led cross-functional telecom projects and introduced reporting workflows that improved data visibility and operational decision-making
- Coordinated design and survey operations, ensuring accurate project documentation and on-time delivery
- Managed communication between field teams and stakeholders to keep projects aligned and on track

Project Design (Consultant)

2012 – 2019 | Outside US

- Managed large-scale construction and infrastructure projects, including 5M+ sq ft commercial developments and multi-structure bridge programs, ensuring successful delivery aligned with business objectives
- Directed planning, quality control, and execution across engineering workflows, improving operational efficiency and ensuring consistent, high-quality project outcomes

CORE COMPETENCIES & TECHNICAL EXPERTISE

- **Business Intelligence & Visualization:** Power BI (Desktop, Service), DAX, dashboard design, KPI development, data storytelling
- **Data Engineering & Databases:** SQL Server, T-SQL (CTEs, Stored Procedures, Views), query optimization, data validation, performance tuning
- **ETL & Data Modeling:** SSIS, end-to-end ETL pipeline development, star schema design, Power Query
- **Programming & Analytics:** PostgreSQL, REST APIs, hands-on experience building data workflows from the database layer through the API into reporting
- **Soft Skills:** Translating business requirements into technical solutions, stakeholder communication, problem-solving, process documentation
- **Microsoft Fabric:** Lakehouse architecture, OneLake, Dataflow Gen2, Delta tables, Direct Lake semantic models, DAX measures, Power BI report publishing
- **Snowflake:** Data loading via internal stages, SQL querying (SELECT, JOIN, GROUP BY, CTEs, window functions), Power BI integration via native Snowflake connector

PORTFOLIO

milad-gerami.github.io

EDUCATION + CERTIFICATION

- B.Sc. Civil Engineering - Tehran Azad University (IAU)
- Data Analytics & Power BI - Certified
